

An h1 header

Link Text 1 - This is a link to an external website.

Link Text 2 - This is a link to a local document (replace `local-doc.html` with the actual filename).

Link Text 3 - This is an internal link to a section heading within the current document.

[Link Text 4]¹ - This is a reference-style link, and the link's URL and title are defined elsewhere in the document.

Link Text 5 - This is an external link with a title attribute that will be shown when you hover over the link.

Link Text 6 - This is another reference-style link with the URL and title defined elsewhere in the document.

Paragraphs are separated by a blank line.

2nd paragraph. *Italic*, **bold**, and `monospace`. Itemized lists look like:

- this one
- that one
- the other one

Note that — not considering the asterisk — the actual text content starts at 4-columns in.

Block quotes are written like so.

They can span multiple paragraphs, if you like.

Use 3 dashes for an em-dash. Use 2 dashes for ranges (ex., “it’s all in chapters 12–14”). Three dots ... will be converted to an ellipsis. Unicode is supported.

An h2 header

Here’s a numbered list:

1. first item
2. second item
3. third item

Note again how the actual text starts at 4 columns in (4 characters from the left side). Here’s a code sample:

```
# Let me re-iterate ...  
for i in 1 .. 10 { do-something(i) }
```

¹Footnote text goes here.

As you probably guessed, indented 4 spaces. By the way, instead of indenting the block, you can use delimited blocks, if you like:

```
define foobar() {  
    print "Welcome to flavor country!";  
}
```

(which makes copying & pasting easier). You can optionally mark the delimited block for Pandoc to syntax highlight it:

```
import time  
# Quick, count to ten!  
for i in range(10):  
    # (but not *too* quick)  
    time.sleep(0.5)  
    print i
```

An h3 header

Now a nested list:

1. First, get these ingredients:
 - carrots
 - celery
 - lentils
2. Boil some water.
3. Dump everything in the pot and follow this algorithm:

```
find wooden spoon  
uncover pot  
stir  
cover pot  
balance wooden spoon precariously on pot handle  
wait 10 minutes  
goto first step (or shut off burner when done)
```

Do not bump wooden spoon or it will fall.

Notice again how text always lines up on 4-space indents (including that last line which continues item 3 above).

Here's a link to a website, to a local doc, and to a section heading in the current doc. Here's a footnote ².

Tables can look like this:

²Footnote text goes here.

Table 1: Shoes, their sizes, and what they're made of

size	material	color
9	leather	brown
10	hemp canvas	natural
11	glass	transparent

(The above is the caption for the table.) Pandoc also supports multi-line tables:

keyword	text
red	Sunsets, apples, and other red or reddish things.
green	Leaves, grass, frogs and other things it's not easy being.

A horizontal rule follows.

Here's a definition list:

apples Good for making applesauce. oranges
Citrus! tomatoes
There's no "e" in tomatoe.

Again, text is indented 4 spaces. (Put a blank line between each term/definition pair to spread things out more.)

Here's a "line block":

Line one
Line too
Line tree

Inline math equations go in like so: $\omega = d\phi/dt$. Display math should get its own line and be put in in double-dollarsigns:

$$I = \int \rho R^2 dV$$

And note that you can backslash-escape any punctuation characters which you wish to be displayed literally, ex.: 'foo', *bar*, etc.
